Why Backup
Google Workspace

Google Does Not Offer Point-in-time Recovery

"You have a limited time from when the data was permanently deleted to restore files and messages. After that, the data is gone forever."

Google

Backup Means No More Data Loss

Backup SaaS data or risk losing customers, partners, and employees.

Gartner

Backups are critical in ransomware recovery and response, if you are infected, a backup may be the best way to recover your critical data.

CISA

Regulations Mandate Backup

The controller should have the ability to restore the availability and access to personal data in a timely manner in the event of a physical or technical incident.

GDPR

CAUTION
Data cannot be restored without backup

It's Your Responsibility!

Google's Shared Responsibility Model puts the onus of the data protection, backup, and recovery of your customer's data on you

Recover from Ransomware and Data Loss

Mitigate the risk of ransomware and reduce the cost of downtime with quick data recovery. Encrypted and immutable SaaS backup with unlimited retention lowers your Recovery Time Objective and ensures seamless business continuity.

Native Workarounds are Time-bound and Cumbersome

Native workarounds like Trash Bins and Vault are archival and not built for data recovery. Restoring data is tedious and after the time limit, data is permanently deleted.
